

Oeco SOUNDPROOF MUSIC & RECORDING STUDIOS

The inner live practice room consists of multiple layers of specialist sound-absorbing acoustic materials.

This "room within a room" design is decoupled from the outer structure using isolation connectors and internally lined with a sound-absorbing barrier mat and a double skin of specialist acoustic boarding.

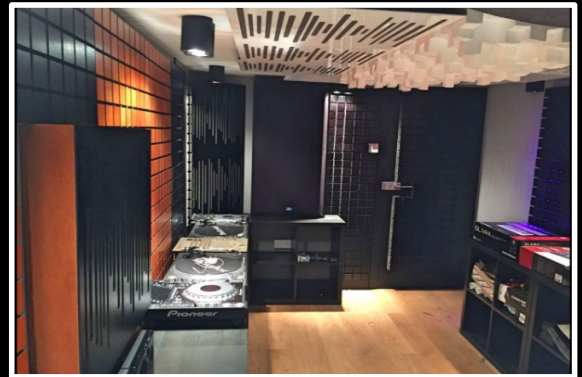

The inner music studio area consists of multiple layers of specialist sound-absorbing acoustic materials, decoupled from the outer structure. Additionally, the interior is lined with a sound-absorbing barrier mat and specialist acoustic boarding.

While 100% total soundproofing is impossible, careful design and the right acoustic materials can achieve near-perfect results.

The recording studio range features a control room or recording area alongside a separate "room within a room" live practice space. Dark grey acoustic glass patio doors provide entry to the control room.

Double soundproof doors connect the control room to the live practice area. A fixed triple-glazed acoustic glass viewing window links the control room to the live practice space, complemented by an external opening window.

The music room range features a separate entrance lobby linked to a live practice area. A dark grey acoustic glass door provides access to the lobby.

Double soundproof doors connect the lobby to the "room within a room" live practice space. Includes a fixed triple-glazed acoustic glass panel from the live practice area.

Specialist materials and acoustic solutions in the walls, floor, ceiling, doors, and windows ensure optimal noise control, creating the perfect recording or practice space. Whatever your sound reduction or noise control needs, we can help.

We specialize in supplying and installing all types of soundproofing solutions for both domestic and professional markets.
